

DEEDS project takes over the #mitigationEU portal from CARISMA

The [ClimateChangeMitigation.eu](#) portal was launched in 2016 and managed by the **CARISMA** project. Currently, 15 EU-funded mitigation projects have joined to share highlights on the portal. As CARISMA will be finalised by 31 July 2018, the coordination of the portal will be handed over to the **DEEDS** project (2017-2020). For more information on DEEDS, see below.

The new contact person for the portal and the mailing list, on behalf of the DEEDS project, is **Anna Skowron** of the World Future Council (anna.skowron@worldfuturecouncil.org).

Reconfirm registration to this mailing list!

Because of European **GDPR** regulations, CARISMA is not allowed to hand over the email addresses in this mailing list to DEEDS. In order to keep receiving these updates (max. 1 per month), **please register for the new [ClimateChangeMitigation.eu update mailing list](#)**.

Latest updates

[Are small modular reactors game changers for the UK electricity system?](#)

Research by **TRANSrisk** shows that the idea of small modular reactors becoming game-changers for climate change mitigation and allowing nuclear power to play an important role in emission reduction is still far from being established.

[Clean power is not enough: More action in other sectors needed to meet Paris targets](#)

CO₂ emissions from non-electricity energy uses, such as industry, transport, and heating, are the greatest impediment to meeting the Paris climate targets, according to new research by the **CD-LINKS** project.

[DEEDS project: Dialogue on European Decarbonisation Strategies](#)

The **DEEDS** project delivers state of the art knowledge on decarbonisation pathways and facilitates knowledge co-creation with policy, business representatives, scientists, NGOs and other stakeholders.

Use #mitigationEU to share outputs of EU climate change mitigation research projects

About the portal for EU-funded mitigation research

EU-funded projects on climate change mitigation are invited to upload highlights of their work on the [ClimateChangeMitigation.eu](#) portal. The portal is managed under the Horizon 2020 project CARISMA and has been developed by a group of EU-funded research and coordination projects for a **wider outreach** of their results

The portal contains short articles on a **range of topics**, such as technologies for mitigation, scenarios for low-emission transitions, policies, case studies and stakeholder engagement.

The portal has been launched by the EU-funded CARISMA project, and will per 1 August 2018 be managed by the EU-funded DEEDS project. In total fifteen (finalised and ongoing) EU-funded mitigation research and coordination projects have joined (see [Related EU projects](#)). Additional projects are invited to become involved as well.

Contribute to the portal

Uploading articles to the portal is easy. Project coordinators can request log-in codes which give access to a user-friendly online text editor for preparing and posting articles. For acquiring log-in codes and further information about the portal, please contact **Anna Skowron** of the World Future Council (anna.skowron@worldfuturecouncil.org).

We also invite you to **promote** the [ClimateChangeMitigation.eu](#) portal via Twitter (using the **#mitigationEU** hashtag), and to invite others to subscribe to this **update** mailing list via [climatechangemitigation.eu/update](#).
