

CLIMATECHANGE MITIGATION.EU

EU-funded research on reducing emissions

The [ClimateChangeMitigation.eu](#) portal has recently been launched. On the portal, EU-funded research projects post highlight of their work, so that information from different projects can be easily accessed in one place. The portal covers a range of mitigation-related topics, including mitigation technologies and practices, scenarios and models, links to relevant data sources, case studies, policy information, and issues on stakeholder engagement.

EU-funded mitigation-related research projects are invited to upload highlights of their work on the platform. For those projects that did not yet receive a user name and password, please contact the webmaster Jan Harnych of ENVIROS (jan.harnych@enviros.cz). For more information on the portal and its background, please contact Wytze van der Gaast of JIN Climate and Sustainability (wytze@jin.ngo).

A monthly update on recent articles will be circulated via this email list. We have taken the liberty to enroll you to this list. Others can register via climatechangemitigation.eu/update.

Latest updates

[Assessing pathways for rapid solar PV expansion in the Netherlands](#)

Case study analysis by the TRANSrisk project on two low-carbon transition pathways in the Netherlands: (1) Up-scaling of small-scale solar panel use; (2) Large-scale solar parks on state-owned land.

[Article 7 of the EED: energy efficiency obligations and alternatives](#)

The ENSPOL project has launched an online platform focusing on Energy Efficiency Obligation schemes (EEOs) and alternative measures, to inform and improve the implementation of the Energy Efficiency Directive, Article 7.

[Impacts of Interactions between EU Climate and Energy Policies](#)

Report by the CARISMA project on case studies of environmental and climate change policy making with a specific focus on how the results of chosen policies have been influenced by other policies.

Other articles uploaded this month:

- [Uncertainties and Risks for Climate Policy – a review](#) (TRANSrisk)
- [Low-carbon pathways – challenges and opportunities](#) (PATHWAYS)
- [MATISE – System Mapping Tool](#) (TRANSrisk)
- [The role of social acceptance in clean technology deployment](#) (POLIMP)

Use #mitigationEU to share outputs of EU climate change mitigation research projects

The portal has been launched by the EU-funded CARISMA project. Nine other (finalised and ongoing) EU-funded mitigation research and coordination projects have joined (see [Related EU projects](#)). Additional projects are invited to become involved as well.
