

 Use #mitigationEU to share outputs of EU climate change mitigation research projects

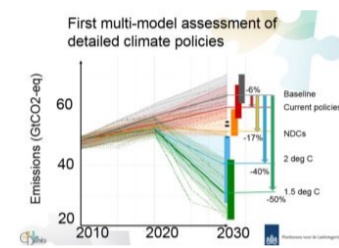

CARISMA and DEEDS ensure continuity of the portal

The [ClimateChangeMitigation.eu](#) portal has been initiated by the EU-funded CARISMA project. In order for the portal to be maintained also after CARISMA finalises (July 2018), the project collaborates with the new DEEDS project to transfer ownership. [DEEDS](#) runs until September 2020, which means that the portal can be maintained and strengthened over the coming years.

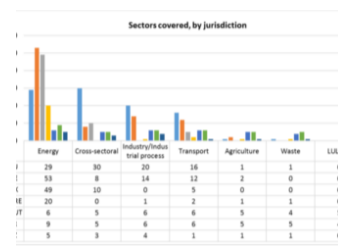

The picture shows the symbolic handover of the portal during the CARISMA Final Conference, 6 February in Brussels, by Heleen de Coninck (Radboud University, CARISMA project coordinator) and Adriaan Slob (TNO, DEEDS project coordinator).

Latest updates

Summary report of CD-LINKS at COP23

During three events of the **CD-LINKS** project at COP23 in Bonn, comparisons of the NDCs and strategies to reach the 1.5 and 2°C goals for key countries like Brazil, China, the European Union, and India, were made.

Meta-analysis of climate change policy evaluations in the EU

Evaluation of climate change mitigation policy is crucial for understanding how well policies and measures work. **CARISMA** carried out a meta-analysis of such evaluations in the EU and Member States.

Expert assessment of risks in climate change mitigation pathways

The **TRANSrisk** project is exploring how risks associated with policies may enhance or constrain different carbon mitigation pathways.

About the portal for EU-funded mitigation research

EU-funded projects on climate change mitigation are invited to upload highlights of their work on the [ClimateChangeMitigation.eu](#) portal. The portal is managed under the Horizon 2020 project CARISMA and has been developed by a group of EU-funded research and coordination projects for a **wider outreach** of their results

The portal contains short articles on a **range of topics**, such as technologies for mitigation, scenarios for low-emission transitions, policies, case studies and stakeholder engagement.

The portal has been launched by the EU-funded CARISMA project. Thirteen other (finalised and ongoing) EU-funded mitigation research and coordination projects have joined (see [Related EU projects](#)). Additional projects are invited to become involved as well.

Contribute to the portal

Uploading articles to the portal is easy. Project coordinators can request log-in codes which give access to a user-friendly online text editor for preparing and posting articles. For acquiring log-in codes and further information about the portal, please contact **Erwin Hofman** of JIN Climate and Sustainability (erwin@jin.ngo).

We also invite you to **promote** the [ClimateChangeMitigation.eu](#) portal via Twitter (using the [#mitigationEU](#) hashtag), and to invite others to subscribe to this **update** mailing list via [climatechangemitigation.eu/update](#).
